

Resco Integration

for Business Central

Integrate

Resco with Dynamics 365 Business Central

Build custom solutions with advanced mobility features and let users work with Business Central data in the field.

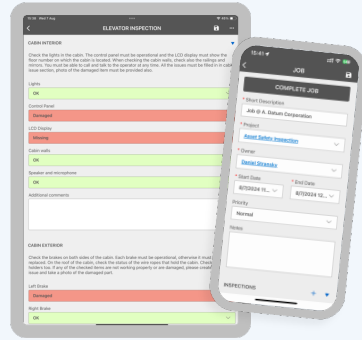

resco

Fast and responsive mobile apps

With Resco-powered mobile apps, clients can perform detailed on-site inspections, track time, optimize job routing, schedule tasks, or access Outlook emails — all while working with Business Central data in the field.

All functionality and data are fully available in offline mode as well.

Build custom projects or an industry vertical

Customers and partners

Can use the Mobile App Development toolkit to build apps tailored to customers' business workflows.

OEM partners

Can use their know-how to build solutions for specific industries and customize them for multiple companies in the same vertical.

For example

On-site inspections and maintenance of assets or checking inventory and generating sales orders in the field.

Business Central data integrates with the following Resco products

- Mobile App Development Toolkit
- Inspections+
- Field Sales+
- Field Service+

Discover all Resco product features at resco.net

Enter a world of new opportunities

Equip field service or sales teams

Enable data sharing data between back office and field teams

Increase work efficiency and productivity

Keep track of all resources, even in offline mode

Extend workflow automation

How the integration works

1. Install Resco Suite to your Microsoft Dynamics 365 CE / Microsoft Dataverse / Microsoft Power Platform environment
2. Business Central integrates natively with Dynamics / Dataverse / Power Platform (please ensure you're working with the latest version of Business Central)

Then use Resco features and Resco CRM as your mobile frontend.

Find more information at docs.resco.net/wiki/Business_Central

Key advantages

- Give users fast and responsive apps that work in any conditions.
- Build complex custom solutions with advanced mobile features.
- Customize a solution for multiple companies in the same vertical.

Use case examples

Create work orders in Business Central and assign them to technicians with the Resco app.

Track work hours, visits, and resources in the Resco app, and sync updates back to Business Central.

Check inventory availability and generate sales orders using the Resco app.

Why Resco for Business Central?

Resco brings over 25 years of expertise in enterprise mobility, empowering Microsoft Dynamics 365 organizations to work smarter and faster on the go.
